

THURSDAY NIGHT BASIC MACHINING

Build Your Confidence in Manual Metal Lathes and Milling Machines

Designed for those currently working in a trade or workshop environment, ATEC's Thursday Night Basic Machining course provides practical, hands-on experience with manual machining in a supportive workshop setting. Based on the nationally recognised unit MEM07005 – Perform General Machining, this non-accredited short course focuses on developing essential machining skills that can be applied in the workplace.

What you'll learn

Over four Thursday evenings, you'll:

- Gain practical experience using manual lathes and milling machines.
- Learn safe machining practices and correct machine operation.
- Develop essential machining techniques through hands-on activities.

Participants will be introduced to both lathes and milling machines before having the opportunity to spend additional time developing the skills most relevant to their work or interests.

Why do this course?

If you're looking to refresh your skills or build greater confidence in manual machining, this course provides practical experience that can be applied immediately in the workplace.

Benefits include:

- Hands-on, practical workshop training.
- Small class sizes (maximum of 8 participants).
- Learn from an experienced industry trainer.
- Develop skills you can apply immediately in the workplace.
- Receive an ATEC Statement of Attendance upon completion.

Career pathways

The skills gained in this course are valuable across a range of industries, including:

- Mechanical Engineering
- Fabrication
- Manufacturing
- Maintenance
- Defence and General Engineering

Whether you're looking to strengthen your existing trade skills or broaden your workshop capability, this course provides a solid foundation in manual machining.

Who should attend?

This course is suitable for individuals who:

- Are currently employed in a trade or workshop environment.
- Want to develop or refresh their manual machining skills.
- Are looking to build confidence using manual machining equipment.

Entry Requirement: Current trade or workshop experience is required.
